PRESS RELEASE
For Immediate Release

Gray Army Airfield 1st to Complete IDS5TM Version 1.8 Database Administrator Course

KENNESAW, GA (September 2016) – Systems Atlanta, Inc. (SAI) is excited to announce that the first ever IDS5TM Version 1.8. (v1.8.) Database Administrator Course has been completed at Ft. Lewis, Gray Army Airfield (AAF), WA. Using Systems Atlanta’s mobile training lab, Jeremy Stout, SAI Senior Instructor, educated 6 students on all aspects of IDS5TM v1.8. software, building from basic fundamentals through the mastering of its newest, most advanced features.

The Database Administrator Course is a full 5 days with time built in for the instructor to review and assist in the enhancement of the site’s current and live IDS5TM database. This is a great opportunity to put into effect skills learned during the instructional phase of the class. The Ft. Lewis, Gray AAF class was very successful and the local Database Administrators have already begun incorporating new IDS5TM v1.8 features into their Army Airfield Automation System (AAAS) database.

IDS5TM v1.8. includes many new capabilities and improvements designed to help decrease IDS5TM Database Administration workload, as well as introducing features designed to increase system efficiencies and enhance air traffic controller situational awareness. All AAAS locations are scheduled for upgrade to IDS5TM v1.8. by the last week of October 2016.

IDS5TM Database Administrator Courses are offered throughout the year and available both on-site at your location or at the SAI Headquarters in Kennesaw GA. Customized dates to meet your needs are also available. For more information or to schedule a class, please call or visit us online.

About Systems Atlanta, Inc.

Systems Atlanta, Inc. (SAI) provides comprehensive solutions and services to address the technology requirements of civilian, government, and military air traffic control, aviation and emergency facilities. A pioneer in the Information Display Systems (IDS) industry, SAI has more than 30 years of experience developing and implementing IDS networks in diverse operational environments around the world. The company’s solutions include the widely-adopted and highly-customizable IDS5 product suite, network and software engineering, classroom and online training courses, technical support, project/program management, and other services designed to improve customers’ information access, situational awareness, responsiveness, and operational efficiencies.
